- (2) The provisions set forth in this regulation are not applicable to the actions enumerated below except that the Federal Insurance Administrator or the Associate Director, SLPS, as appropriate shall comply with the spirit of the Orders to the extent practicable:
- (i) The issuance of individual flood insurance policies and policy interpretations:
- (ii) The adjustment of claims made under the Standard Flood Insurance Policy;
- (iii) The hiring of independent contractors to assist in the implementation of the National Flood Insurance Program;
- (iv) The issuance of individual flood insurance maps, Map Information Facility map determinations, and map amendments; and
- (v) The conferring of eligibility for emergency or regular program (NFIP) benefits upon communities.
- (g) For the action listed below, the Regional Director shall apply steps 1, 4, 5 and 8 of the decision-making process (§§ 9.7, 9.10 and 9.11). For any action which is excluded from the actions listed below, (except as indicated in paragraphs (c), (d) and (f) of this section regarding other categories of partial or total exclusion), the full 8-step process applies (See §9.6). The Regional Director may also require certain other portions of the decision-making process to be carried out for individual actions as is deemed necessary. The references are to the Disaster Relief Act of 1974, Public Law 93-288. The above requirements apply to repairs, under section 402, between \$5,000 and \$25,000 to damaged structures of facilities except for:
- (1) Actions in a floodway or coastal high hazard area; or
- (2) New or substantially improved structures or facilities; or
- (3) Facilities or structures which have previously sustained structural damage from flooding due to a major disaster or emergency.

§ 9.6 Decision-making process.

(a) *Purpose*. The purpose of this section is to set out the floodplain man-

agement and wetlands protection decision-making process to be followed by the Agency in applying the Orders to its actions. While the decision-making process was initially designed to address the floodplain Order's requirements, the process will also satisfy the wetlands Order's provisions due to the close similarity of the two directives. The numbering of Steps 1 through 8 does not firmly require that the steps be followed sequentially. As information is gathered throughout the decision-making process and as additional information is needed, reevaluation of lower numbered steps may be necessary.

(b) Except as otherwise provided in §9.5 (c), (d), (f), and (g) regarding categories of partial or total exclusion when proposing an action, the Agency shall apply the 8-step decision-making process. FEMA shall:

Step 1. Determine whether the proposed action is located in a wetland and/or the 100-year floodplain (500-year floodplain for critical actions); and whether it has the potential to affect or be affected by a floodplain or wetland (see § 9.7);

Step 2. Notify the public at the earliest possible time of the intent to carry out an action in a floodplain or wetland, and involve the affected and interested public in the decision-making process (see §9.8);

Step 3. Identify and evaluate practicable alternatives to locating the proposed action in a floodplain or wetland (including alternative sites, actions and the "no action" option) (see §9.9). If a practicable alternative exists outside the floodplain or wetland FEMA must locate the action at the alternative site.

Step 4. Identify the potential direct and indirect impacts associated with the occupancy or modification of floodplains and wetlands and the potential direct and indirect support of floodplain and wetland development that could result from the proposed action (see § 9.10);

Step 5. Minimize the potential adverse impacts and support to or within floodplains and wetlands to be identified under Step 4, restore and preserve the natural and beneficial values served by floodplains, and preserve and

enhance the natural and beneficial values served by wetlands (see § 9.11);

Step 6. Reevaluate the proposed action to determine first, if it is still practicable in light of its exposure to flood hazards, the extent to which it will aggravate the hazards to others, and its potential to disrupt floodplain and wetland values and second, if alternatives preliminarily rejected at Step 3 are practicable in light of the information gained in Steps 4 and 5. FEMA shall not act in a floodplain or wetland unless it is the only practicable location (see § 9.9);

Step 7. Prepare and provide the public with a finding and public explanation of any final decision that the floodplain or wetland is the only practicable alternative (see §9.12); and

Step 8. Review the implementation and post-implementation phases of the proposed action to ensure that the requirements stated in §9.11 are fully implemented. Oversight responsibility shall be integrated into existing proc-

[45 FR 59526, Sept. 9, 1980, as amended at 49 FR 35583, Sept. 10, 1984; 50 FR 40006, Oct. 1,

§ 9.7 Determination of proposed action's location.

- (a) The purpose of this section is to establish Agency procedures for determining whether any action as proposed is located in or affects (1) the base floodplain (the Agency shall substitute the 500-year floodplain for the base floodplain where the action being proposed involves a critical action), or (2) a wetland.
- (b) Information needed. The Agency shall obtain enough information so that it can fulfill the requirements of the Orders to (1) avoid floodplain and wetland locations unless they are the only practicable alternatives; and (2) minimize harm to and within floodplains and wetlands. In all cases, FEMA shall determine whether the proposed action is located in a floodplain or wetland. In the absence of a finding to the contrary, FEMA may assume that a proposed action involving a facility or structure that has been flooded is in the floodplain. Information about the 100-year and 500-year floods and location of floodways and

coastal high hazard areas may also be needed to comply with these regulations, especially $\S 9.11$. The following additional flooding characteristics shall be identified by the Regional Director as appropriate:

- (i) Velocity of floodwater;
- (ii) Rate of rise of floodwater;
- (iii) Duration of flooding;
- (iv) Available warning and evacuation time and routes;
 - (v) Special problems:
 - (A) Levees:
 - (B) Erosion;
 - (C) Subsidence:
 - (D) Sink holes:
- (E) Ice jams;
- (F) Debris load:
- (G) Pollutants;
- (H) Wave heights;
- (I) Groundwater flooding;
- (J) Mudflow.
- (c) Floodplain determination. (1) In the search for flood hazard information, FEMA shall follow the sequence below:
- (i) The Regional Director shall consult the FEMA Flood Insurance Rate Map (FIRM) the Flood Boundary Floodway Map (FBFM) and the Flood Insurance Study (FIS).
- (ii) If a detailed map (FIRM or FBFM) is not available, the Regional Director shall consult an FEMA Flood Hazard Boundary Map (FHBM) . If data on flood elevations, floodways, or coastal high hazard areas are needed, or if the map does not delineate the flood hazard boundaries in the vicinity of the proposed site, the Regional Director shall seek the necessary detailed information and assistance from the sources listed below.
